

Transport connection welded on site

Introduction

ACO has developed a new connection method to enable installers to hygienically weld together six metre sections of drainage channel on site. The new welded connection technique is perfect for use in hygienically sensitive applications including food and drink manufacture.

It is hygienically superior to other connection methods including the traditional method of joining channel sections which uses nuts, bolts and rubber flanges, and is more reliable in the longer term.

Full installation instructions are included in ACO's new installation manual. For more information or to download PDF copy of the manual, visit www.aco-buildingdrainage.com.

Product Information

- Welding installation manual available with order or can be downloaded as PDF online
- Preferred connection for the highest hygienic requirements (high risk zones)
- The most reliable long term-connection
- Hygienic design following EN 1672, EN ISO 14159 and EHEDG document No. 8, 13 and 44
- Compatible with ACO protective covers
